

ENA Code of Ethics

This Code will offer ENA members appropriate and useful ethical guidance.

These principles are intended to aid members of ENA in maintaining a professional level of ethical conduct related to radiation protection, in particular. They are to be regarded as guidelines. Members may use them to determine the propriety of their conduct in all relationships in which they are exercising their professional expertise.

1. Members shall exercise their professional skill and judgment to the best of their ability and carry out their responsibilities with integrity.
2. Members should strive to improve, and regularly assess in an appropriate way, their competence (professional knowledge, skills and attitudes). With this aim in view, they shall use adequate means to take into account all the available scientific information and to avoid inappropriate selection of the sources. Upgrade of skills and scientific know-how is a recommended individual task of all members.
3. Members should, whenever practicable and appropriate, correct misleading, sensational and unwarranted statements by others concerning radiation, radiation protection in general and NORM in particular.
4. Members should take advantage of opportunities to increase public understanding and awareness on NORM and of the aims and objectives of the ENA.
5. Members wanting to make use of the ENA logo shall follow the following rules: Ordinary members can only use the logo on personalised documents such as business cards and email signatures, and not on official or general documents (letters, web-site, promotional material, publications, etc.) of the company they are employed by. Corporate members can use the ENA logo on all official documents of the company and of its employees.
